# ACKNOWLEDGEMENT

We are deeply grateful to Almighty Allah for granting us the strength and determination to successfully complete our First Semester E-Project, "Liberty Electronics." His blessings made this accomplishment possible.

We would also like to thank our parents and family members for their continuous encouragement and support throughout this journey, especially during the late-night hours of development.

Our sincere appreciation extends to our classmates and friends, whose valuable feedback and cooperation helped us enhance the overall functionality and design of the website.

For the creation of this project, we used Visual Studio Code for web development, alongside other essential tools and resources. Our aim was to build a user-friendly and responsive website for Liberty Electronics, offering a seamless experience to users interested in browsing electronic products and services.

We hope our efforts reflect in the quality of the website and that it serves its intended purpose effectively

# PREFACE

We are grateful that our project, "Liberty Electronics," has been successfully completed. We would like to dedicate this achievement to the Aptech faculty, who continually work to bring out the best in their students and offer constant encouragement. Special thanks to our class teacher, Sir Sami, whose guidance and motivation inspired us to stay focused and enthusiastic throughout the development process.

We hope that our efforts will be recognized and receive encouraging feedback.

# PROJECT OVERVIEW

The thirst for learning, upgrading technical skills and applying the concepts in real life environment at a fast pace is what the industry demands from IT professionals today. However busy work schedules, far-flung locations, unavailability of convenient time-slots pose as major barriers when it comes to applying the concepts into realism. And hence the need to look out for alternative means of implementation in the form of laddered approach.

The above truly pose as constraints especially for our students too! With their busy schedules, it is indeed difficult for our students to keep up with the genuine and constant need for integrated application which can be seen live especially so in the field of IT education where technology can change on the spur of a moment. Well, technology does come to our rescue at such times!!

Keeping the above in mind and in tune with our constant endeavour to use Technology in our training model, we at Aptech have thought of revolutionizing the way our students learn and implement the concepts using tools themselves by providing a live and synchronous eProject learning environment!

# So what is this eProject?

eProject is a step-by-step learning environment that closely simulates the classroom and Lab based learning environment into actual implementation. It is a project implementation at your fingertips!! An electronic, live juncture on the machine that allows you to

- o Practice step by step i.e. laddered approach.
- o Build a larger more robust application.
- o Usage of certain utilities in applications designed by user.
- o Single program to unified code leading to a complete application.
  - Learn implementation of concepts in a phased manner.
  - Enhance skills and add value.
- o Work on real life projects.
- o Give a real life scenario and help to create applications more complicated and useful.
  - Mentoring through email support.

The students at the centre are expected to complete this eProject and send complete project along with the documentation to eProjects Team

Looking forward to a positive response from your end!!

# Objectives of the project

The Objective of this program is to give a sample project to work on real life projects. These applications help you build a larger more robust application.

The objective is not to teach you JavaScript/Dreamweaver but to provide you with a real life scenario and help you create basic applications using the tools.

You can revise the chapters before you start with the project.

This project is meant for students who have completed the module of Dreamweaver. These programs should be done in the Lab sessions with assistance of the faculty if required.

It is very essential that a student has a clear understanding of the subject. Students should go through the project and solve the assignments as per requirements given.

Kindly get back to eProjects Team in case of any doubts regarding the application or its objectives.

# Problem Statement

Liberty Electronics is a shop selling various electronic products. The company advertises by distributing the pamphlets, advertising on television and so on. Due to rapid development in internet field, the company decides to launch a website where people will get all the information about the various products available with them easily.

# Requirement Specification:

The Web site is to be created based on the following requirements.

1. The Home Page should be created making use of sections with a suitable logo
2. The site should display a menu which will contain the options for brief introduction about the various products available, location of the shop and any other information if required.
3. The information should be categorized according to the brand names of the products like if a User wants to see only Samsung products then he click on a Link/button/menu etc and he will see only That Brand products.
4. When a user selects any particular brand, a list of products for that brand will be displayed
5. A brief summary of features of individual products should be displayed on the Web Page along with the product but detailed Features should be stored in Individual Word documents which can be downloaded or viewed by the User who wishes to see the same.
6. The user should also be able to compare the various products of different as well as similar brands.
7. There should be a "Contact Us" page which will have the Address of the Company which is as follows and the mail address which when clicked will invoke the local mail client from where they can send an email.

# **Hardware/ Software Requirements**

## **Hardware**

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

## **Software [Either or Combination as per Course/Sem]**

- Notepad/HTML editor/CoffeeCup
- Angular / Angular JS / React / BootStrap
- Dreamweaver / Figma
- MS IE / Chrome / FireFox / Netscape /MS Edge
